

Cybersecurity Recovery & Stabilization for a Building Materials Manufacturer

INDUSTRY: Manufacturing (Building Materials)

USERS: 30

LOCATION: Single Site

IT ENVIRONMENT: On-premise with limited cybersecurity protection

Challenge:

The client experienced a cybersecurity incident that compromised their network and disrupted day-to-day operations. With limited internal IT support and growing concerns about data loss, they urgently needed a partner who could respond quickly and minimize downtime.

Solution:

Prototype:IT was engaged immediately to assess the scope of the incident. Our team:

- Contained the breach and identified the entry point
- Removed all threats and malicious files
- Restored impacted systems and services
- Conducted a post-incident security audit
- Implemented baseline security controls to prevent recurrence

Result:

The client's systems were stabilized within 48 hours, and operations fully resumed with minimal data loss. With our help, they not only recovered from the attack but also emerged with a stronger, more secure IT environment.

Key Wins:

Rapid incident response, network stabilization, long-term cybersecurity improvement.
